To Whom It May Concern:

Tetrad Services Inc. was contracted to inspect and overhaul a 15 MW General Electric Co. turbine generator. During the inventory of the equipment, It was discovered the AC control/lube oil and the DC bearing oil pumps were missing. The original pump manufacturer stated the pumps were obsolete with no records for manufacturing.

The Sims Pump Company designed and manufactured the following SIMSITE Structural Composite Material pumps:

- A) One 30 horse power AC pump rated at 200 GPM at 150 PSI
- B) One 10 horse power DC pump rated at 70 GPM at 40 PSI

The pumps have been in service two years and have performed faultlessly. Thanks to the Sims Pump Company, the unit went commercial on time.

Respectfully,
Roger W. Meyer
President
